

Supplementary Figure 1. The diabetes quality assessment indicator management system at Kyung Hee University Hospital. This system consists of three primary categories of indicators: continuity, test, and prescription. Each indicator is distinguished by the treatment department, sex, age, use of insulin, and duration of the administration of oral hypoglycemic agents and insulin. The total number of subjects, number of subjects who meet the indicator, and the formula for calculating the indicators are shown. HbA1c, glycated hemoglobin.
