

**Supplementary Table 3. Causes of early R-CHOP treatment discontinuation in the 58 patients**

Causes	Value
Treatment-related toxicities	43 (74.1)
Fatigue (grade 3)	19 (44.2)
Infections not related to neutropenia (grade 3–5)	10 (23.3)
Febrile neutropenia (grade 3–5)	10 (23.3)
Bowel perforation/bleeding (grade 4–5)	2 (4.7)
Congestive heart failure (grade 3)	1 (2.3)
Autonomic neuropathy (grade 3)	1 (2.3)
Disease progression	8 (13.8)
Adverse events presumably not related to lymphoma progression or to treatment toxicities <sup>a)</sup>	4 (6.9)
Follow-up loss	3 (5.2)

Values are presented as number (%).

<sup>a)</sup>Included acute coronary syndrome (n = 1), fatal pulmonary embolism (n = 1), small bowel adhesive ileus and following surgery that were not related to underlying lymphoma (n = 1), and femur neck fracture (n = 1).
